DETAILED ACTION

Informal Examiner's Amendment

By way of this informal Examiner's Amendment, the following change is made in the specification. At line 2 of paragraph [0001] on page 2, insert the following wording immediately after the year "2001": --, now U.S. Patent No. 6,635,313 B2--. This minor change in the specification is made by the Examiner in order to update the filing status of parent application Serial Number 10/016,062.

Claim Objections

The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 19, 20, and 21 have been renumbered 18, 19, and 20, respectively.

Allowable Subject Matter

Claims 1 to 20 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art does not teach, suggest, or disclose applicants' claimed zinc-coated high strength steel product or a fully hard-worked and zinc-coated high strength dual phase steel, wherein either product has a conventional hot-dip zinc coating applied to at least one surface of the steel product or a conventional galvanneal coating applied to at least one surface of the steel product, *and the zinc coating layer consists essentially of specific amounts of iron, molybdenum, aluminum, and manganese*. Also, the prior art does not teach, suggest, or disclose applicants' claimed method of coating low and ultra-low carbon cold-rolled steel materials with a zinc coating by controlling the metallurgy of a high strength steel material and the composition of a zinc coating bath such

that the zinc-coated steel product possesses a *coated surface composition consisting essentially of specific amounts of iron, molybdenum, aluminum, and manganese*. The Examiner believes that the prior art does not teach or reasonably suggest that controlled high strength dual phase steel compositions may be galvanized and galvanized as if those compositions were a low or ultra-low carbon steel, wherein an improved and superior zinc-base coating is obtained whenever the zinc coating composition consists essentially of specific amounts of iron, molybdenum, aluminum, and manganese.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
